## VibroFlex –new flexibility in optical vibration measurements from nano to macro-sized structures

With **VibroFlex modular laser vibration measurement system**, Polytec introduces new flexibility in optical vibration measurements with a modular sensor solution that adapts to your needs. **Characterize your touch displays without contact.**

**VibroFlex** includes specifications that make it capable of measuring any vibration or motion you can think of:

- Resolve from DC to 24 MHz bandwidth
- Sub-picometer displacements
- Up to 30 m/s fast movements
- Output velocity, displacement, and acceleration simultaneously
